MoSCoW Prioritisations

Must haves:

+ Ability to take user input of a given item name and return information of that item (READ)
+ Can directly add custom/new item entries to item database that has same functionality as other items (CREATE)
+ Ability to update items (UPDATE)
+ Ability to delete items (DELETE)
+ Should be able to handle HTTP Requests
+ Connection to MySQL Database server where data is being persisted
+ 60% Test coverage

Should haves:

+ 80% test coverage minimum

Could haves:

+ Special item tags, that allow for custom query search ("Search by defensive items")
+ Custom Exceptions

Would haves:

+ Users have access to their own CRUD functional inventory, which they can then reference and add items in from the main item database
